

THERMOFORMING PRESS SOLARA SM – 80 ITEMS / MIN

« *The thermoforming press SOLARA SM, for a production of disposable paperboard items* »

- The thermoforming press SOLARA SM is designed for the production of **disposable paperboard items** such as : plates, trays, bowls, pastry and bakery moulds, etc.
- The thermoforming press SOLARA SM works from **punched and scored cardboard blanks** that are loaded manually into two magazines. The two independents heads allow the **simultaneous production of two different products**.
- The design of the thermoforming press SOLARA SM makes **easy** its **use** and its **maintenance**.
- The strong forming force exerted by the press, combined with a long lasting pressure, guarantees a **high quality thermoforming**.

- **Number of cycles** : 40 items/min by head, i.e. 80 items/min
- **Weight** : 4 tons
- **Power consumption** : - electricity : 15 kWh
- compressed air : 5 m³h at 6 bars
- **Required ground surface** : 5 m²
