

SEMI-AUTOMATIC CASING MACHINE STRATBOX – UP TO 120 BOXES/MIN

« **STRATBOX** : for a quick and easy case packing for round boxes of processed cheese »

- The casing machine STRATBOX is dedicated to the **semi-automatic case packing** of round boxes of processed cheese in triangles.
- STRATBOX is perfect in addition to your banding and labeling machine ROLBOX from GMA. It can handle **up to 120 boxes/min** (speed depends on box piling configuration).
- At the exit of the infeed conveyor, boxes are piled up automatically according to predefined dimensions of the case. An operator put a preformed case manually onto the boxes batch stratification. The operator turns over the case (automatic rotation of a mobile plate). Thus, the forming case is evacuated on a conveyor.

- **Weight** : 400 kilos
- **Power consumption** : - electricity : 0,2 kWh
- compressed air : 2,5 m³h at 6 bars
- **Required ground surface** : 1,30m x 1,50m
- **Dimensions of cases** :
 - height : 220 mm maxi (up to 9 boxes per layer)
 - adjustable length : about 3 to 4 boxes per row
 - width : 2 rows per case usually
